

# Index

## Index for Volume 15

**Bold type is used for contributors to this volume. The suffix e indicates editorial comment; c, a conference; r, a book review. Abbreviations: AAR, alkali-aggregate reactivity; ASR, alkali-silicate reactivity; FR, fibre reinforced; FRP, fibre reinforced plastics**

- Aggregates
  - alkali-aggregate reactivity, *see* Alkali-aggregate reactivity
  - metasedimentary rocks, 7-12
- Alkali-aggregate reactivity, 1-114 (special issue)
  - Canadian aggregates, 7-12, 13-19, 85-100, 101-14
  - expansion, *see* Expansion due to ASR
  - gel fluorescence test, 3-6
  - metasedimentary rock aggregates, 7-12
- Alkali-aggregate reactivity control
  - with chemical additives, 21-6
  - with pozzolans, 7-12, 17-18, 75-85, 207-8
- Alumina, calcia-alumina FR cement, 165-72
- Aramid FR rods, 121-9
- Azari, M.M., Mangat and Tu**, 'Chloride ingress in microsilica concrete', 215-21
- Bannahene, Nana K., and Hudec** 'Chemical treatments and additives for controlling alkali reactivity', 21-6
- Beaudoin, J.J., Gu and Xie**, 'Impedance characterization of microcracking behaviour in fibre-reinforced cement composites', 173-80
- Bérubé, Marc-André**, 'Canadian experience with testing for alkali-aggregate reactivity in concrete', 27-47
- Bérubé, Marc-André and Fournier**, 'Recent applications of a modified gel pat test to determine the potential alkali-silica reactivity of carbonate aggregates', 49-73
- Blended cements
  - applications, 237-45
  - high-calcium fly ash cement, 231-5
  - microsilica cement, 215-21, 237-45
  - pozzolanic, 185-214
- Braided FRP rods, 121-9
- Bridges
  - ASR in deck, 4, 5
  - safety, 115-16c
- Büyükoztürk, Oral and Lee**, 'Assessment of interfacial fracture toughness in concrete composites', 143-51
- Calcia-alumina FR cement, 165-72
- Canada
  - alkali-aggregate reactivity, 7-12, 13-19, 85-100
  - test methods, 16-17, 27-47
- Carbon FR cement, 178-9, 180
  - polymer-impregnated composites, 153-63
- Carbonation of pozzolanic cements, 203-4, 205
- Chem, H., Soles and Malhotra**, 'Investigations of supplementary cementing materials for reducing alkali-aggregate reactions', 75-84
- Chemical additives to control ASR, 21-6
- Chloride penetration
  - microsilica concrete, 215-21
  - pozzolanic cements, 205-6
- Compressive strength
  - calcia-alumina FR cement, 165-72
  - carbon FR polymer-impregnated composites, 156, 157, 158, 161
  - fly ash cement, 23, 233-5
  - fly ash concrete, 223-9
  - pozzolan-containing concrete, 199, 201
  - pozzolanic cements, 190-1, 196-9
- Condensed silica fume, to control ASR, 75-85
- Conferences and symposia
  - forthcoming, 117-20c, 181-2c, 247-9c
  - reports, 115-16c
- Control of ASR, *see* Alkali-aggregate reactivity control
- Cracking, microcracking characterised by AC impedance method, 173-80
- Creep
  - carbon FR polymer-impregnated composites, 161, 162
  - pozzolan-containing concrete, 203
- Curing
  - pozzolan-containing concrete, 200
  - pozzolanic cements, 198-9
- DeMerchant, D.P. and Soles**, 'CANMET research on alkali-aggregate reactivity in New Brunswick', 85-100, 101-14
- Drying shrinkage
  - carbon FR polymer-impregnated composites, 59-61, 162
  - pozzolan-containing concrete, 202-3
- Dunn, Stanley A., Yon, Mitchell and Koutsky**, 'Introduction of new reinforcement for cementitious materials—calcia/alumina (CA) fibers formed by the inviscid melt-spinning process', 165-72
- Durability
  - concrete from blended cements, 243-4
  - correlation with AAR in minerals, 101-14
  - pozzolanic cements, 203-9
- Efficiency factor, fly ash concrete, 201-2, 223-9
- Epoxy resin, impregnated FRP rods, 121-9
- Expansion due to ASR
  - control, with chemical additives, 21-6
  - test methods, *see under* Test methods
- Failure modes, punching, 131-42
- Fibre-reinforced cement composites
  - carbon, 153-63
  - microcracking characterised by AC impedance method, 173-80
- Fibre-reinforced plastics reinforcement, 121-9
- Flexural strength, carbon FR polymer-impregnated composites, 158, 159, 162
- Fly ash
  - behaviour in concrete, 223-9
  - cements, 189, 190-209, 231-5, 237
  - Lingan, 7-12
  - to control ASR, 7-12, 18, 75-85
- Fournier, Benolt and Bérubé**, 'Recent applications of a modified gel pat test to determine the potential alkali-silica reactivity of carbonate aggregates', 49-73
- Fracture mechanics, composite interface, 143-51
- Fracture toughness, interfacial, 143-51
- Freeze-thaw resistance of carbon FR polymer-impregnated composites, 159, 160, 162
- Frost action on pozzolan cements, 208-9
- Ganesh Babu, K. and Siva Nageswara Rao**, 'Efficiency of fly ash in concrete', 223-9
- Gel fluorescence test, 3-6
- Gel pat test, 49-73

- Gillott, J.E. and Soles, 'Petrography of concrete cores from New Brunswick, relating to the durability problem', 101-14
- Glass FR rods, 121-9
- Gu, Ping, Xie and Beaudoin, 'Impedance characterization of micro-cracking behaviour in fibre-reinforced cement composites', 173-80
- Hudec, Peter P. and Banahene, 'Chemical treatments and additives for controlling alkali reactivity', 21-6
- Hydration, pozzolanic, 191-3
- Impedance spectroscopy, 173-80
- Interfacial fracture toughness, 143-51
- Inviscid melt-spinning process, 165-72
- Kotsovos, Michael D. and Krstulovic-Opara, 'Effect of vertical prestressing on the punching failure', 131-42
- Koutsky, James A., Yon, Mitchell and Dunn, 'Introduction of new reinforcement for cementitious materials—calcia/alumina (CA) fibers formed by the inviscid melt-spinning process', 165-72
- Krstulovic-Opara, Neven and Kotsovos, 'Effect of vertical prestressing on the punching failure', 131-42
- Langley, W.S., MacNeill and Soles 'Alkali-reactive aggregates in Nova Scotia: CANMET studies of their distribution and control of the reactivity', 7-12
- Leaching of pozzolanic cements, 204-5
- Lee, Burtrand I. and Park, 'Mechanical properties of carbon-fiber-reinforced polymer impregnated cement composites', 153-63
- Lee, Kwang-Myong and Büyüköztürk, 'Assessment of interfacial fracture toughness in concrete composites', 143-51
- Lingan fly ash, 7-12
- MacNeill, S.G., Langley and Soles, 'Alkali-reactive aggregates in Nova Scotia: CANMET studies of their distribution and control of the reactivity', 7-12
- Malhotra, V.M., Soles and Chem, 'Investigations of supplementary cementing materials for reducing alkali-aggregate reactions', 75-84
- Mangat, P.S., Azari and Tu, 'Chloride ingress in microsilica concrete', 215-21
- Massazza, Franco, 'Pozzolanic cements', 185-214
- Melt-spinning process, 165-72
- Metasedimentary rock aggregates, 7-12
- Mica flake reinforced cement, 177-8, 180
- Microsilica concrete, chloride penetration, 215-21
- Microstructure  
calcia-alumina FR cement, 169-71  
gel pat test specimens, 65-71  
in mineral specimens showing ASR, 101-14  
pozzolanic cements, 190, 194-5
- Miller, E.W., 'Blended cements—applications and implications', 237-45
- Mitchell, Brian S., Yon, Dunn and Koutsky, 'Introduction of new reinforcement for cementitious materials—calcia/alumina (CA) fibers formed by the inviscid melt-spinning (IMS) process', 165-72
- Nanni, Antonio, Okamoto, Tanigaki and Osakada, 'Tensile properties of braided FRP rods for concrete reinforcement', 121-9
- Natesaiyer, K., 'Some applications of the gel fluorescence test for alkali-aggregate reaction in concrete', 3-6
- New Brunswick  
AAR in minerals, 85-100  
durability of concrete, 101-14
- Okamoto, Tadashi, Nanni, Tanigaki and Osakada, 'Tensile properties of braided FRP rods for concrete reinforcement', 121-9
- Osakada, Satoshi, Nanni, Okamoto, and Tanigaki, 'Tensile properties of braided FRP rods for concrete reinforcement', 121-9
- Papayianni, Joanna, 'Use of a high-calcium fly ash in blended type cement production', 231-5
- Park, Seung Bum and Lee, 'Mechanical properties of carbon-fiber-reinforced polymer impregnated cement composites', 153-63
- Permeability  
microsilica concrete, 215-21  
pozzolanic cements, 195-6
- Pessimum effect, 23-4
- Petrography  
cement minerals in Canada, 13-19, 51-4, 85-100, 101-14  
tests for ASR, 16, 28, 42-4  
gel pat test specimens, 54, 61-71
- Plasticisers in pozzolanic composites, 199, 200-1
- Poisson's ratio for FRP rods, 126-8
- Polymers  
carbon FR polymer-impregnated composites, 153-63  
polypropylene FR cement, 176-7, 179-80
- Poly(vinyl alcohol) FR rods, 121-9
- Porosity of pozzolanic cements, 190, 195-6
- Portland cement  
calcia-alumina FR, 165-72  
Canadian, 14-16
- Pozzolans, 185-6  
cements, 185-214
- Pozzolans—*contd.*  
control of AAR, 7-12, 17-18, 75-85, 207-8  
pozzolan-containing concrete, 199-203
- Prestressing, vertical, 131-42
- Punching failure of reinforced concrete slabs, 131-42
- Quality management of blended cements, 244-5
- Rogers, C.A. 'Alkali-aggregate reactivity in Canada', 13-19
- Safety of bridges, 115-16c
- Salts for ASR control, 21-6
- Sandwich specimens, fracture toughness, 143-51
- Sea water, reaction with pozzolanic cements, 207
- Silica, ASR, *see under* Alkali-aggregate reactivity
- Silica fume, 75-85, 189-90, 196-209
- Siva Nageswara Rao, G. and Ganesh Babu, 'Efficiency of fly ash in concrete', 223-9
- Slabs, vertically prestressed, 131-42
- Slag cements, 75-85, 183-4e, 237
- Soles, James A., 1-2e
- Soles, James A., Chem, and Malhotra, 'Investigations of supplementary cementing materials for reducing alkali-aggregate reactions', 75-84
- Soles, James A. and DeMerchant, 'CANMET research on alkali-aggregate reactivity in New Brunswick', 85-100
- Soles, James A. and Gillott, 'Petrography of concrete cores from New Brunswick', 101-14
- Soles, James A., MacNeill and Langley, 'Alkali-reactive aggregates in Nova Scotia: CANMET studies of their distribution and control of the reactivity', 7-12
- Stabilization of ASR, *see* Alkali-aggregate reactivity control
- Stress-strain characteristics, FRP rods, 125-8
- Sulphates, reaction with pozzolanic cements, 206-7
- Tanigaki, Masaharu, Nanni, Okamoto and Osakada, 'Tensile properties of braided FRP rods for concrete reinforcement', 121-9
- Tensile strength  
braided FRP rods, 121-9  
carbon FR polymer-impregnated composites, 156-9, 161-2
- Test methods  
AC impedance characterisation of microcracking behaviour, 173-80  
alkali-aggregate reactivity, 7-12, 13-19  
expansion due to ASR, 16-17, 27-47  
accelerated, 7-12, 16-17, 33-7, 40-2, 55, 63-5  
chemical, 17, 28-30, 42-4, 55, 63-4  
concrete prism, 16, 37-42, 55, 61-2

Test methods—*contd.*

- gel fluorescence, 3–6
  - gel pat test, 49–73
  - mortar bar, 16–17, 32–7, 42–4, 55, 65
  - petrographic, 16, 28, 42–4, 85–100, 101–14
  - interfacial fracture toughness, 143–51
- Tu, S.C., Mangat and Azari, 'Chloride ingress in microsilica concrete', 215–21

Water absorption, microsilica concrete, 220–1

Xie, Ping, Gu and Beaudoin, 'Impedance characterization of micro-cracking behaviour in fibre-reinforced cement composites', 173–80

Yon, Kyung-Yol, Mitchell, Dunn and Koutsky, 'Introduction of new reinforcement for cementitious materials—calcia/alumina (CA) fibers formed by the inviscid melt-spinning (IMS) process', 165–72
